

SWING TRADING BLUEPRINT

THE BEGINNER'S ROADMAP TO FINDING, PLANNING & MANAGING SWING TRADES

Learn the Process. Plan the Trade. Manage the Risk.

- ✓ Understand swing trading
- ✓ Identify trends
- ✓ Build a watchlist
- ✓ Plan entries and exits
- ✓ Manage risk
- ✓ Create your own trading system
- ✓ Read price action
- ✓ Find support & resistance
- ✓ Understand breakouts & pullbacks
- ✓ Calculate position size
- ✓ Build a trading journal

A Note to the Reader

Swing trading is not a shortcut to quick money.

The objective of this book is not to promise profits. It is to teach you a structured way to study the market, plan a trade and manage risk.

A trading setup can work in one market condition and fail in another.

Therefore, a beginner's first goal should be:

Process → Discipline → Risk Control → Review

Not:

“How much money can I make?”

Throughout this book, you'll learn a simple framework:

SCAN → ANALYZE → PLAN → EXECUTE → MANAGE → REVIEW

Use this book as an educational framework. Before using real money, understand the risks involved and consider practicing with paper trades or simulated trades.

Trading the Swings

Swing trading is a trading approach where a trader attempts to capture a price movement over several trading sessions or potentially several weeks.

Instead of trying to predict every small market movement, the swing trader searches for a specific setup.

The Swing Trading Process

- SCAN — Find stocks worth studying.
- ANALYZE — Study trend, structure, volume and price action.
- PLAN — Define entry, stop-loss, target and position size.
- EXECUTE — Take the trade only when your conditions are satisfied.
- MANAGE — Follow your predefined rules.
- REVIEW — Record the trade and learn from it.

*You cannot control the market.
You can control your process.*

The 5 Things Every Beginner Should Understand

- 1. Trend** — Price can generally move: Uptrend, Downtrend, or Sideways.
- 2. Support** — A price area where buying interest has previously appeared.
- 3. Resistance** — A price area where selling pressure has previously appeared.
- 4. Volume** — Shows the amount of trading activity and can provide useful context when studying price movements.
- 5. Market Structure** — Higher High + Higher Low = Bullish. Lower High + Lower Low = Bearish. Repeated highs/lows = Range.

*Beginner Rule: Don't put 10 indicators on your chart.
Start with: PRICE + STRUCTURE + VOLUME*

DAY 6 – TRADING LEARNING

⇒ VOLUME (Market ki Power) ⇐

- ① Volume kya hota hai?
 - Volume ka matlab hota hai kitne log buy/sell kar rahe hain.
 - Yani market me kitna trade ho raha hai.
- ② Volume ka matlab
 - High volume = strong move 🏹
 - Low volume = weak move 😊
- ③ Price + Volume relation
 - Price ↑ + Volume ↑ = strong uptrend ✓
 - Price ↓ + Volume ↑ = strong downtrend ✓
 - Price move + Volume ↓ = weak ya fake move ⚠️
- ④ Kaise use kare?
 - Breakout ke time volume check karo.
 - Volume zyada ho to move strong hota hai.
- ⑤ Aaj ka kaam (Practical)
 - ✓ Chart kholo
 - ✓ Volume bars dekho
 - ✓ Price ke saath compare karo.

Yaad rakho :

Volume price ko confirm karta hai.
Volume ke bina move adhoora hai.
- ⑥ Day 6 Rule
 - ✗ Volume ignore mat karo.
 - ✓ Hamesha volume check karo.

GOAL : Volume samajhna 100

★ VOLUME BARS ★

Understanding volume as market participation —
how price + volume together confirm the strength
of a move.

Understand Price Action First

A candlestick represents price movement during a particular period. A basic candle contains: Open, High, Low, Close.

Bullish Candle — The closing price is above the opening price.

Bearish Candle — The closing price is below the opening price.

Candle Body — Shows the distance between open and close.

Wick — Shows the price area reached during the period but not maintained into the close.

What Should You Observe?

Don't memorize hundreds of candle patterns. Instead ask:

Where did the candle appear?

A bullish-looking candle near important support can mean something different from the same candle appearing in the middle of a random range.

The Context Matters More Than One Candle.

A quick reference to the most common bullish and bearish reversal candlestick patterns.

Finding Important Price Zones

Support and resistance are better viewed as areas or zones, rather than always treating them as exact single prices.

Support — Imagine a stock repeatedly reacts around ₹100. ₹100 may become an important support area.

Resistance — If the stock repeatedly struggles around ₹120, that area may act as resistance.

What to Look For

- Previous swing highs
- Previous swing lows
- Consolidation zones
- Repeated reactions
- Breakout areas
- Major price levels

Important Question

“What happened here previously?”

Price history can help you identify areas where buyers and sellers previously became active.

Don't Chase the Market

A common beginner mistake is searching for stocks only after they have already made a huge move.

Instead, create a watchlist before the trade appears.

Watchlist Checklist

- ☐ Adequate liquidity
- ☐ Healthy trading activity
- ☐ Clear price structure
- ☐ Understandable trend
- ☐ Manageable volatility
- ☐ Defined support/resistance
- ☐ No trade based only on rumours

Create 3 Categories

A — Ready: Setup is close to your conditions.

B — Developing: Interesting but needs confirmation.

C — Watch: Currently doesn't meet your rules.

*A watchlist is NOT a buy list.
It is a list of stocks you are researching.*

PAGE 8 — THE 5-STEP STOCK FILTER

Before You Even Think About Entry

STEP 1 — TREND

Is the overall structure clear?

STEP 2 — LEVEL

Where are the important support and resistance zones?

STEP 3 — VOLUME

Is trading activity supporting the price movement?

STEP 4 — SETUP

Does the stock match one of your predefined setups?

STEP 5 — RISK

Can you define: Entry, Stop-loss, Target area, Position size?

If you cannot define the risk: SKIP THE TRADE.

Remember: A missed opportunity is better than an unplanned trade.

PAGE 9 — SETUP #1: BREAKOUT

Understanding Breakout Trading

A breakout occurs when price moves beyond an established price range or resistance area. But: every breakout is not a quality breakout.

Look For

- **Resistance** — Where has price previously struggled?
- **Consolidation** — Has price spent time moving sideways?
- **Breakout** — Does price move beyond the important area?
- **Confirmation** — Does the overall price/volume behaviour support the move?
- **Risk** — Where is the setup invalidated?

Framework: Consolidation → Resistance → Breakout → Confirmation → Trade Management

NOT A GAMBLE, IT'S A GAME OF PROBABILITIES

LEARN | PLAN | EXECUTE | REVIEW | IMPROVE

STAY CONSISTENT & COMPOUND YOUR CAPITAL

A quick-reference cheat sheet covering entry setups, risk management and a trade plan template.

Don't Confuse a Pullback With a Reversal

A pullback is a temporary movement against the broader trend.

Example: Uptrend → Pullback → Support → Potential continuation

Study

- Previous support
- Trend structure
- Price reaction
- Volume
- Confirmation
- Risk/reward

The Main Question

Is this a controlled pullback or is the trend actually breaking down?

You don't have to predict perfectly. Instead, define:

"At what price/structure would my trade idea become invalid?"

That level becomes important for your risk plan.

Never Enter Without a Plan

Before entering any trade, complete this worksheet.

Stock: _____

Setup: _____

Entry: ₹ _____

Stop-Loss: ₹ _____

Target Area: ₹ _____

Risk/Share: ₹ _____

Quantity: _____

Capital Used: ₹ _____

Reason for Trade: _____

Example

Entry = ₹100, Stop = ₹95, Risk per share = ₹5. If planned maximum risk = ₹500:

Quantity = ₹500 ÷ ₹5 = 100 shares

Capital used: 100 × ₹100 = ₹10,000

This is only an educational calculation.

Plan first. Click Buy second.

PAGE 12 — STOP-LOSS

Your Invalidation Point

A stop-loss should not simply be chosen because:

"I can afford only ₹100 loss."

Instead ask:

Where does my trade idea become invalid?

For example, if your setup depends on a particular support area holding, a decisive break of that structure may invalidate the setup.

Then position size can be calculated based on the distance between entry and stop.

Framework: Entry → Risk Area → Stop-Loss

Never

- ☐ Move the stop randomly
- ☐ Remove the stop because you don't want to take a loss
- ☐ Keep widening the stop to avoid being exited
- ☐ Take a trade where the logical stop makes the risk too large

Remember: A stop-loss is part of the trade plan—not a guarantee of an exact execution price.

PAGE 13 — POSITION SIZING

How Much Should You Buy?

Position sizing is one of the most important parts of risk management.

Position Size = Maximum Planned Risk ÷ Risk Per Share

Example

Account capital = ₹20,000

Planned trade risk = ₹200

Entry = ₹250

Stop = ₹240

Risk/share: ₹250 – ₹240 = ₹10

Quantity: ₹200 ÷ ₹10 = 20 shares

Capital used: $20 \times ₹250 = ₹5,000$

The Important Lesson

Don't think: "I have ₹20,000, so I'll buy ₹20,000 worth."

*Think: "How much am I willing to risk if this setup fails?"
Then calculate the quantity.*

PAGE 14 — RISK-TO-REWARD

Compare Potential Reward With Defined Risk

Suppose: Entry = ₹100, Stop = ₹95, Risk = ₹5, Potential target = ₹115, Potential reward = ₹15

Risk : Reward = 1 : 3

This does not mean the trade will definitely succeed. It is simply a framework for comparing the potential reward with the amount at risk.

Before Entry Ask

- What can I lose?
- Where is my invalidation?
- What is the realistic target area?
- Is the potential reward worth the defined risk?

Never manipulate your numbers just to make a trade look attractive.

PAGE 15 — WHEN NOT TO TRADE

Sometimes No Trade Is the Best Decision

Avoid taking a trade when:

- ☐ You don't understand the setup
- ☐ You cannot define a logical stop
- ☐ The stock is too illiquid for your plan
- ☐ You're entering because of FOMO
- ☐ Someone promised a "sure-shot" trade
- ☐ Risk is too large
- ☐ You're trying to recover a previous loss
- ☐ Your setup isn't present
- ☐ You're emotionally distracted

No-Trade Checklist

Setup present? YES / NO

Entry defined? YES / NO

Stop defined? YES / NO

Target area defined? YES / NO

Position size calculated? YES / NO

Risk acceptable? YES / NO

If the important answers are NO: WALK AWAY.

PAGE 16 — TRADE MANAGEMENT & EXIT

What Happens After You Enter?

Your job doesn't finish when you buy. Now you have to manage the position according to your plan.

Avoid

- ☐ Randomly moving the stop
- ☐ Adding more because price falls
- ☐ Exiting because of one small candle
- ☐ Increasing quantity because price rises
- ☐ Watching the chart every minute

Exit Methods

- 1. Target Exit** — Price reaches the predefined target area.
- 2. Structure Exit** — The trade thesis becomes invalid.
- 3. Trailing Exit** — A predefined trailing method is used to protect gains.
- 4. Time Exit** — The trade doesn't move within the expected time window.

Core Rule: Decide your exit logic before emotions take control.

PAGE 17 — THE TRADING JOURNAL

Your Journal = Your Trading Data

Every trade should become information.

Stock: _____

Date: _____

Setup: _____

Entry: ₹ _____

Stop: ₹ _____

Target: ₹ _____

Quantity: _____

Exit: ₹ _____

Result: ₹ _____

Review

- Why did I enter?
- Did I follow my rules? YES / NO
- What did I do well?
- What mistake did I make?
- What will I improve next time?

*A trading journal isn't just for recording profit and loss.
It is for discovering your behaviour and patterns.*

PAGE 18 — THE 10-TRADE EXPERIMENT

Don't Judge a Strategy From One Trade

One trade tells you very little. Create a small sample and document every trade consistently.

Trade	Setup	Result
1	_____	_____
2	_____	_____
3	_____	_____
4	_____	_____
5	_____	_____
6	_____	_____
7	_____	_____
8	_____	_____
9	_____	_____
10	_____	_____

After 10 Trades, Review

Win Rate: _____

Average Gain: _____

Average Loss: _____

Total Result: _____

Best Setup: _____

Most Common Mistake: _____

*Don't try to prove: "My strategy always works."
Try to discover: "How does my strategy behave, and how well do I follow it?"*

My Trading Blueprint

My Setups

Setup 1: _____

Setup 2: _____

Setup 3: _____

My Entry Rules: _____

My Stop-Loss Rules: _____

My Position-Sizing Rule: _____

My Exit Rules: _____

Maximum Open Trades: _____

My Review Schedule: Daily / Weekly

*My Biggest Trading Rule:
I will not take a trade unless my predefined conditions are satisfied.*

From Beginner to Structured Trader

Days 1-7 — Foundation: Candlesticks, Trend, Support/resistance, Market structure, Volume, Risk management. Goal: understand the language of charts.

Days 8-14 — Observation: Build your watchlist. Study breakouts, pullbacks, support reactions, trend continuation, failed setups.

Days 15-21 — Paper Trading: Practice Entry → Stop → Target → Position Size → Result. Record every simulated trade.

Days 22-30 — Review: Review your journal. Which setups were easiest? Where did I break my rules? Did I manage risk consistently?

30-DAY TRADING MASTERY ROADMAP

WEEK 1: CORE BASICS (FOUNDATION)

- Day 1 : Market structure -
: uptrend, downtrend, sideways
- Day 2 : Candlestick basics -
: bullish, bearish, doji, engulfing
- Day 3 : Support & resistance zones
- Day 4 : Trendlines & channels
- Day 4 : Volume basics
- Day 6 : Risk management (1-2% rule)
- Day 7 : Trading psychology basics

WEEK 2: TECHNICAL ANALYSIS

- Day 8 : Moving averages (EMA 9/21/50)
- Day 9 : RSI
- Day 10 : MACD
- Day 11 : Bollinger Bands
- Day 12 : Breakouts vs fakeouts
- Day 13 : Pullback strategy
- Day 14 : Chart patterns
(flags, triangles, H&S)

WEEK 3: SMART MONEY CONCEPTS

- Day 15 : Supply & demand
- Day 16 : Order blocks
- Day 17 : Liquidity zones
- Day 18 : Break of Structure (BOS)
- Day 19 : Change of Character (CHOC)
- Day 20 : Fair Value Gaps (FVG)
- Day 21 : Premium & discount zones

WEEK 4: PROFESSIONAL EXECUTION

- Day 22 : Session timing (London/NY)
- Day 23 : Entry models
- Day 24 : Stop-loss placement
- Day 25 : Take-profit strategy
- Day 26 : Backtesting
- Day 27 : Trading journal setup
- Day 28 : Emotional discipline
- Day 29 : Build one complete strategy
- Day 30 : Demo trade + review

DAILY ROUTINE

- 1 hour learning
- 30 min chart practice
- 15 min journal

GOAL

Consistency
> Quick profit

PRO RULE

"Protect capital first,
profits second."

BONUS

Focus on one market only initially:

- Forex
- Indices
- Crypto
- Stocks

REMEMBER

CONSISTENCY + PATIENCE + DISCIPLINE = SUCCESS

A day-by-day 30-day structure for building trading skill
— from core basics to a complete strategy.

THE FQORE TRADING PRINCIPLE

YOU DON'T NEED TO PREDICT EVERY MARKET MOVEMENT.

You don't need 20 indicators. You don't need a secret formula.

You need: A Clear Setup · A Defined Entry · A Logical Stop · Controlled Position Size · A Planned Exit · A Trading Journal · Discipline

"The goal isn't to become profitable overnight.

The goal is to become more systematic, more disciplined and more aware of risk with every trade you study."

SWING TRADING BLUEPRINT

Learn the Process. Plan the Trade. Manage the Risk. Review the Result.
